

Anti-Counterfeit Policy

Counterfeit products are an industry-wide issue. Use of counterfeit products carries the risk of serious performance, reliability, and safety issues.

Pletronics, Inc (PLE) and its affiliated companies, Cardinal Components and Isotemp, are committed to delivering high-quality and reliable frequency control products to our customers.

Counterfeit products are difficult to detect due to the counterfeiter's ability to mark and label products that give the appearance of being genuine PLE products.

To help us eliminate the risk of counterfeit products, we strongly encourage our customers to purchase all PLE family frequency control products either directly through us or one of our authorized distributors. Products purchased outside of these channels run the risk of not being genuine PLE products.

To eliminate the use of counterfeit materials in our manufacturing, PLE maintains internal policies and procedures, such as Authorized Vendor Lists and purchasing only directly or through authorized distributors.
